

HIGH PERFORMANCE OPTRONICS & OPTO-MECHANICS

SCROME Bore rods Caliber rods for boresighters

OVERVIEW

The SCROME bore rods range comprises accuracy-driven, military maintenance oriented tools and are the perfect match for our LDB x4 and LDB-V boresights to ensure your weapon systems are perfectly sighted in.

FEATURES AND BENEFITS

- **QUALITATIVE** Built from selected steels and redesigned for even better stiffness, our rods ensure the performance of the boresight is used at its best.
- **COMPATIBLE** All our rods feature a 12mm interface, compatible with either our classic LDB x4 or newer LDB-V boresighters, as well as many boresighters from the competition.
- **PROFILED** To combine stiffness and compatibility with most weapons, our rods are designed to take into account flash hidere, muzzle breaks and other devices for most common barrels. Please contact us for a compatibility evaluation.

APPLICATIONS

Workshop and field boresighting for all caliber, ranging from small arms, turret mounted and RWS to artillery calibers (please contact us)
